SUMMARY

Computer Engineering graduate with experience building Python-based data pipelines and supporting fraud detection systems in a production environment. Improved model performance by ~30% through feature engineering and data validation on large datasets (10k+ records). Skilled in writing reliable, scalable code to process data, automate workflows, and improve system efficiency.

SKILLS

- **Programming:** Python, C, SQL
- **Data:** Pandas, Data Cleaning, Feature Engineering, Exploratory Data Analysis
- **Tools:** Git, GitHub, VS Code, Jira
- **Technologies:** REST APIs, Data Pipelines
- **Concepts:** Data Structures & Algorithms, OOP

PROFESSIONAL EXPERIENCE

STATE FARM

Dallas, TX

Data Science Intern

AUG 2023-MAY 2024

- Improved fraud detection model performance by ~30% through feature engineering and data validation on datasets exceeding 10k+ records
- Built Python (Pandas) data pipelines to clean and transform large datasets, reducing data inconsistencies and improving downstream model reliability
- Automated recurring reporting workflows using Python, reducing manual processing time and accelerating reporting turnaround
- Queried and validated structured data using SQL to support model development and ensure data accuracy
- Collaborated with engineers and data scientists in an Agile environment, iterating on solutions and improving output quality based on feedback

HYBRID ATELIER

Dallas, TX

Research Assistant

JAN 2021-JUL 2023

- Produced 50+ structured technical reports by analyzing and synthesizing complex data into clear, actionable insights
- Collaborated with cross-functional teams to refine deliverables, improving usability and alignment with stakeholder needs
- Applied structured problem-solving to break down ambiguous requirements and deliver consistent outputs

PROJECTS

AUTOMOBILE FRAUD DETECTION | *Python(BeautifulSoup), Web Scraping, Data Analysis*

[Website](#)

- Built an end-to-end Python pipeline using web scraping and data processing to analyze automobile listings for fraud signals
- Applied anomaly detection techniques to identify suspicious patterns in unstructured datasets
- Structured raw data into analysis-ready formats, improving usability for downstream modeling

ANGLE OF ARRIVAL DETECTION DEVICE | *C, Signal Processing, Hardware*

[GitHub](#)

- Developed a 3-microphone system achieving ~82% directional accuracy using cross-correlation techniques
- Designed, built, and tested a full hardware implementation from circuit design to validation

TRISC PROCESSOR | *VHDL/Verilog, Digital Logic, Altera Quartus, RTL Design*

[GitHub](#)

- Designed and implemented a custom 16-bit processor supporting core instruction execution
- Demonstrated understanding of low-level architecture, memory handling, and instruction processing

VOLUNTEER

CANAANLAND

Irving, TX

Junior Systems Engineer

AUG 2023-PRESENT

- Supported AV systems across 50+ live events, ensuring reliability in high-pressure, real-time environments
- Diagnosed and resolved technical issues quickly to minimize downtime and maintain system performance

EDUCATION

UNIVERSITY OF TEXAS AT ARLINGTON

Bachelor of Science in Computer Engineering; Minor in Computer Information Systems; Minor in Mathematics

- *Honors: Dean's List x8, Merit-Based Presidential Scholarship, Maverick Advantage Scholar*
- *Activities: Alpha Lambda Delta Honor Society, UTA Volunteers, NSBE & SWE*

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
